

### WHAT IS SLIPTIP?

SlipTip is our innovative wash up printer blade system that reduces blade replacement time.

Traditional blade replacement is a painstaking process, requiring the user to remove and clean ink-filled bolt heads and wash up trays.

SlipTip allows printers to change a blade in less than 1 minute with no tools or readjustment needed.

With SlipTip, simply wipe, swipe and replace the blade to save time and money.

- Save up to 78 minutes' replacement time per 6-tray press\*
- Reduce replacement costs by up to £283.92\*
- Avoid blades turning over
- Minimise the use of harmful solvents
- Drastically reduce downtime

### HOW DOES IT WORK?

On a standard press, the wash-up tray must be removed and fully cleaned before you can even start to remove the wash-up blade. In addition to this, often there are adjustments to be made to ensure even blade pressure. Using SlipTip you still need to remove the tray but there is no need to clean it, just wipe the blade, swipe it out then replace with a new one. No tools or adjustments are required.

### SAVE TIME AND MONEY

	Typical replacement time and cost*	Replacement time and cost using SlipTip
Time taken to change 6 blades	90 minutes	12 minutes
Average downtime cost	£48	£6.40
Average blade cost	£27	£24
Rags and solvent	£3	£0.43
Average cost to business	£192	£57.60

**Total savings to business: 78 minutes and £283.92\***
